

JEA Integrated Resource Plan (IRP)

We are working toward a cleaner and more resilient energy future for Northeast Florida.

Current and Future Energy Mix

JEA has developed our initial long-term plan for providing essential energy to our community—**reliably, cost-effectively and sustainably**. While the specific plan details are complex, the goals the JEA Board has set for us are simple, clear and ambitious.

2030 Clean Energy Goals:

- Our power supply portfolio will include 35 percent clean energy.
- We will retire less efficient, higher emitting generating assets.
- We will lead the way by using 100 percent clean energy to serve JEA facilities.
- We will increase and enhance energy efficiency programs to offset growing demands from the electrification of homes, businesses, and vehicles.

Accomplished together in less than a decade, these goals will result in an 80 percent reduction in JEA's overall carbon emissions since 2005.

The work we've done, in collaboration with a diverse group of community stakeholders, is just the start of a longer journey to serve our customers in the best way possible as energy technologies evolve. Our planning and long-range forecasting will continue in an open and transparent manner.

“ I’m proud of the clean energy goals that JEA has established for our community. Planning for the best ways to meet the energy needs of our Northeast Florida customers — **reliably, affordably and sustainably** — will be an ongoing process. I look forward to the continuing engagement with our customers. ”

Jay Stowe, JEA Managing Director & CEO
